DESCRIPTION:

In this project we were asked to design a webpage titled "Hostel Accommodation System for the students of LPU". This include tasks such as designing a navigation bar, heading in a website, importing HD images and forming the gallery, creating a Registration form and mainly use of CSS and JavaScript for the designing and transitions. Each and every useful information has been updated in the website and for more information you can also update us on website.

By using our understanding and the concepts taught in the class we completed our project.

CONTRIBUTION:

Everybody did his part equally in the group. From gathering information which has been taught in the class to researching on the internet. It was our hard work and working everyday bit by bit what made this project.

We have divided our project in small parts and structures for easy and simple implementation. We have divided these small parts into three groups and it is the responsibility of each member to complete one particular project. (see synopsis for more details)

We helped each other tackle problems, coming up with solutions and doing what we were capable of.

LEARNING:

We have learnt a lot of things like how to work in a team, how to divide a big problem into small problems. We learnt many new concepts of CSS, JavaScript, bootstrap, jQuery and we got know how does an actual website works and are designed.

TECHNOLOGIES USED:

1. HTML
2. CSS
3. JavaScript
4. jQuery

OUTLINE OF OUR WEBSITE:

We made many modules and included them in our website. These are the backbone of our website and some basic information about them is mentioned below.

Header:

The header contains call-to-action. You can just click on a tab and it'll lead you straight to the desired part of the page. This section also includes logo of our university.

Home:

This page provides basic information about the services we offer and all necessary information about the website student might need.

Contact:

This page provides an interface, so that user can get in contact with the teams working for the websites and it would help them book their hostel easily.

Facilities:

In this page, we have included all the facilities we offer to student like indoor stadium, laundry, mess, etc.

Rooms:

In this page, we have included the various different type of rooms offered by our university.

Apply:

In this page, we have provided students a interface to register themself online by filling their information in the form given.

Fee:

In this page, we have provided students the basic fee structure.

Now we'll discuss in detail about each section of our website.

HEADER:

The header of our website basically has different call-to-actions which help us navigate to different sections of our website with ease and saves the trouble of scrolling all the way or looking for a specific thing. We kept it simple so as to increase its credibility. Moreover, it also includes the Logo and also contains the drop-down menu for easier navigation.
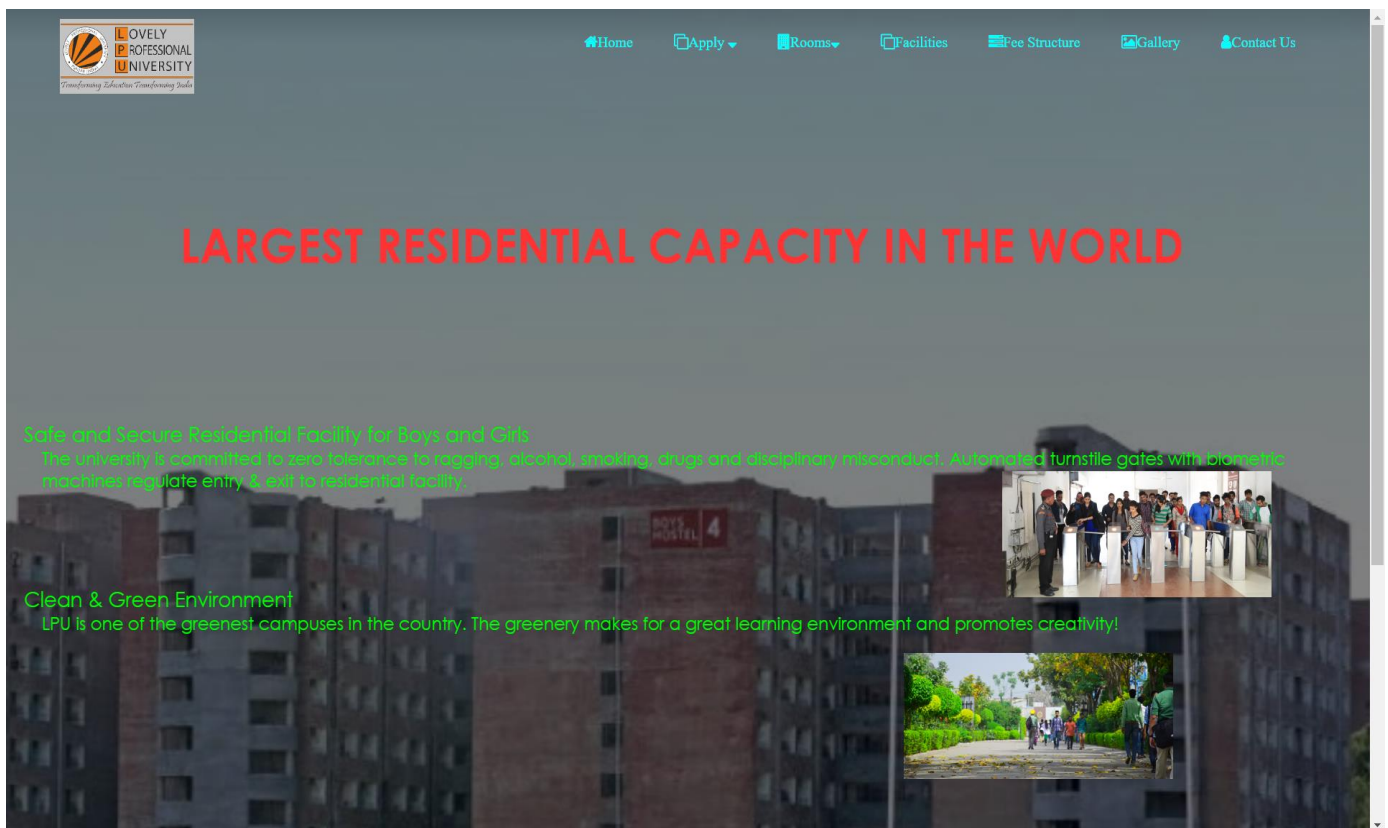

Here is the screenshot of our header:
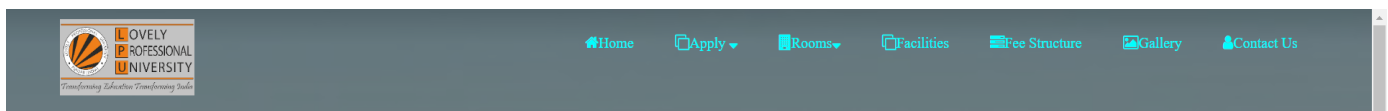

Here is the screenshot of our header Drop-down:
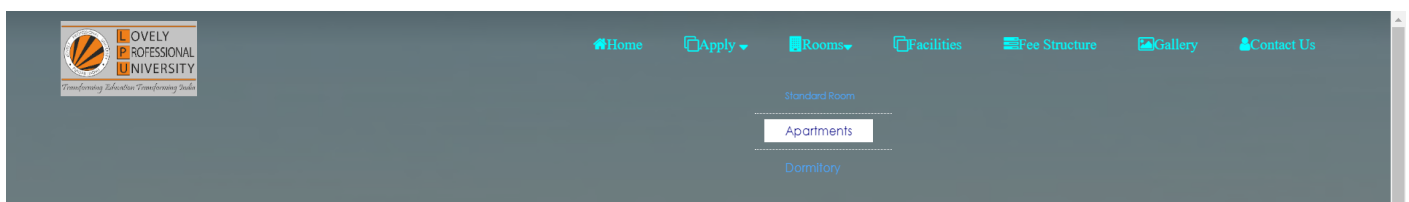

HOME:

This is the home page. This page contains the Title and benefits of stay in hostel. To make the home page look cooler, we added images related to the benefits. The animated to the heartbeat for the infinite loop because of which page look more lively.

Note: Header and navigation will remain constant through out all other pages or modules .

APPLY:

Then comes the apply section of our website. This part further has drop-down which contains 2 parts #New User and # Existing User. In New User Registration form is given so that student an enroll themselves into the hostel. In this form JavaScript is use to open pop up window after submission and that pop-up is further link to home page. And In Existing user senior student can select their room and hostel according to their choice on the bases of result. Rooms are allotted on the first come first serve.
